3 Short Description.....	2

1. Holiday example movie

The movie shows the first steps you can do after the installation of NetBpm. You will see how to deploy and start workflows. Further on you will be informed about the functionality of the NetBpm Web application. But the web application is only an example for the integration of the core functionality in a custom application. It also is possible to integrate that core functionality in a winForm application.

[start movie](#)

If you got curious after watching the video try it yourself at the demo side.

2. Holiday Demo

You can find a demo application at <http://gruenauer.homedns.org/netbpm/intro/index.rails>. This is not a permanent website. If the side is down please wait an hour, if this does not help please inform me by mail (Philipp at netbpm dot org).

The demo shows only a small workflow with a webgui and not the integration functionalities of NetBpm.

3. Short Description

The holiday process allows users to manage planned absences. Every employee is able to request holiday. The requester has to enter the startdate, enddate and a comment. Then this request is presented to the boss of the requester. The boss evaluates. If the holiday is approved, both the HR-responsible and the requester will be informed. If the holiday is disapproved, only the requester will be notified

Let me introduce the people in my fictive organisation used for demo purposes:

- Albert Einstein
- Carl Gauss
- Pierre De Fermat

Albert Einstein and Carl Gauss are both in the 'Research and Development'-department.

Carl Gauss is the boss of the 'Research and Development'-department.

Pierre De Fermat is the 'HR-responsible' for the 'Research and Development'-department.
