2 Top Features and Benefits.....	2

1. What is NetBpm?

NetBpm is a .Net Port of JBpm1. NetBpm is an open source platform for building, executing and managing workflows. It is very simple to use and integrate in other .Net applications.

This Bpm Tool supports the build of Applications which are able to turn business models into executable software models. Business analysts are able to use a model driven approach to design, implement, execute and track business processes. So business people can easily react on business and strategy changes.

2. Top Features and Benefits

- 100% .Net and browser hosted
- 100% Open Source
- works on Microsoft .Net and Mono
- Human-Oriented Collaborative Features
- Powerful Process Automation with Flexibility
